BEADED HOSE GUIDE

Work smarter, not harder as the beaded hose guide allows the fire hose to be pulled freely in any direction and reducing the effort required to pull the hose, making easier and quicker to get a fire hose ready to deploy in a fire emergency. Suitable only for fixed hose reels, this should be installed on the wall close to the where the hose comes off the reel. It's suitable for brand new installations for to replace an existing hose guide.

The beaded hose guide can be used with any of our 19mm or 25mm manual or automatic fire hose reels which are fixed in position. These are not suitable for use with swinging hose reels.
