FIRE DOCUMENT CABINET

The Vigil fire document cabinet keeps all your important fire safety documents in one place and means you can retrieve them quickly during an evacuation. Big enough to fit A4 size papers, books and ring binders, the back of the door also features four hooks to keep those important keys, such as for fire brigade padlocks on gates.

Supplied with a lock and two keys to ensure only those with permission can access the contents, such as your fire wardens and marshals, it also keeps everything together should a fire officer visit. Manufactured for Vigil Products of robust metal, it has a powder-coated finish and is clearly labelled 'Fire Safety Information'.

It's a legal requirement to have a record of your Fire Risk Assessment to hand, and the lockable fire document cabinet is the ideal storage solution, alongside your fire log books, building plans and other files. With three fixing holes on the back, it's easy to secure to a wall, ideally located near your fire alarm panel or other fire safety equipment.
