RUBBER WHEEL STOP

The small rubber wheel stop is made from a high-quality, durable rubber and is perfect for helping to improve parking positioning and preventing drivers from having an impact with a wall or other vehicle. Commonly installed in car parks and garages, reflective yellow means they're visible at all times of the day and instantly recognisable thanks to the yellow and black chevron design.

The rubber kerb stops are manufactured for Vigil Products of a heavy-duty recycled rubber which is durable and weatherproof but is also gentle to car tyres unlike metal or concrete solutions. With a length of 560mm, the parking stop is typically best used in pairs, positioned where the wheels would typically stop, although can be used individually with multiples placed end-to-end.

Perfect for internal and external uses, these ensure the wheels hit the stopper before the vehicle hits a wall, measuring 110(H) x 560(W) x 160(D)mm. Each rubber kerb requires installation using shield anchor bolts which are generally suitable for installation on concrete and tarmac surfaces, although you may find they are not appropriate for your specific requirements and will require alternate fixings which are not provided.

Product	Rubber Wheel Stop
Product Code	VP-RWS560B
H x W x D	110x560x160mm
Weight	4.7kg
Colour	Yellow and Black
Material	100% recycled moulded rubber
Carton Quantity	2
Carton Dimensions	575x305x120mm
