## LARGE RUBBER PARKING STOP

---

The large rubber parking stop not only prevents vehicles from hitting obstructions such as a walls, fencing and other vehicles, it also provides effective delineation. As a result, cars remain within their parking spaces and pathways and cycle routes remain unblocked. Plus, each rubber parking block features reflective yellow stripes for added visibility day and night and a chevron design.

Made of 100% recycled solid rubber, the parking kerb is highly-durable and weatherproof. Measuring 100(H) x 1650(W) x 170(D)mm and weighing in at 12kg, it's up to the job of being a last resort for ensuring a vehicle stops.

Each rubber kerb requires installation using shield anchor bolts which are generally suitable for installation on concrete and tarmac surfaces, although you may find they are not appropriate for your specific requirements and will require alternate fixings which are not provided.

Manufactured for Vigil Products, the large rubber parking kerb is commonly used in garages, parking spaces, charging stations, and loading bays, these protect walls, equipment, bodywork and people, inside and out.

Product	Large Rubber Parking Stop
Product Code	VP-RWS1650B
H x W x D	100x1650x170mm
Weight	13.92kg
Colour	Yellow and Black
Material	100% recycled solid rubber
Carton Quantity	1
