# SPEED BUMP END-CAPS – 5MPH

Our 10mph speed bump end caps are available in yellow or black and are perfect for finishing off your speed ramp. By levelling the ends of the mid-sections, you provide a smart and safe finish and minimise the risk of people tripping. When designing your own kit, don't forget to purchase the mid-sections and it's best to alternative colours, so a yellow cap looks best when placed next to a black mid-section.

With a height of 50mm, each end cap measures 170mm long and 350mm wide and is manufactured of heavy-duty PVC with a chequered pattern to provide extra grip even in poor weather conditions. Often installed in car parks and on private roads where vehicles and pedestrians mix, these are perfect for light use where HGVs do not often travel.

## How to Install Your Speed Bump

In tarmac and concrete, these are best fixed down using shield anchor bolts are designed for heavy-duty, load-bearing applications. To install, first mark the position of bolts, drill the required holes and the correct size, insert the fixing and then secure the speed bump in place.

| Product           | Speed Bump End-Caps – 5mph – Yellow | Speed Bump End-Caps – 5mph – Black |
|-------------------|-------------------------------------|------------------------------------|
